DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for foreign priority under 35
 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. PCT/EP00/09290
 on September 22, 2000.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the large number of projectors and the control device must be shown or the features canceled from the claims. No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Objections

3. Claim 6 is objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim has not been further treated on the merits.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 4-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. There is no antecedent basis for "the ceiling" as recited in claim 4.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1 and 2 are rejected under 35 U.S.C. 102b) as being anticipated by either of Hsieh (US Patent No. 5,123,192) or Cardin (US Patent No. 4,739,567).

Hsieh discloses a method for generating a high-resolution image via a video projector 9 from within a building onto the front side of a window 10 on a building façade (see Figure 1) for viewing from the outside of the building and window. The projector 9 is disposed near the rear of the structure (as shown in Figure 1) and the window is covered with a coating (LCD 71) allowing the image to be visible from the outside of the structure.

Cardin discloses a method for generating a high-resolution image via a video projector 16 from within a building (see Figure 1) onto the front side of a window 10 on a building façade for viewing from the outside of the building and window. The projector 16 is disposed on the

opposite of the projection surface of the window (Figure 1) and the window is covered with a coating (screen 20) allowing the image to be visible from the outside of the structure.

Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hsieh or Cardin in view of Lieb (US Patent No. 5,589,958). Hsieh and Cardin disclose all that is claimed except for an explicit teaching of a large number of projectors for displaying multiple portions of an image or multiple images through multiple windows of a building façade. Lieb discloses a billboard or façade 51 having a plurality of windows 53 each controlled to display portions of image. The image portions together form a single composite image extending across the façade of the billboard 51 (see Figure 6). Lieb also discloses varying the colors of the image portions as desired (column 6, lines 43-45). It would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate the teaching in Lieb, of forming a large composite image from plural image portions projected on the façade of a building through windows, into the image display systems of Hsieh or Cardin for the purpose of providing selective and easily variable high-resolution image displays covering entire building facades in order to attract the attention of a large audience.
